

How is culture or race the product of progressive brain evolution & how does it affect the individual in the present. Proliferation of the family or of the population requires an early differentiation of the individuals, so - the processes of language & culture are the structure of society & control of environment (Gallup).

It will be argued that **social** (not **innate**) aspects are critical factors:

- The nature of the environment (Gallup)
- The way in which the individual is being reared & raised
- The nature of the individual's intelligence
- The nature of the individual's intelligence
- The nature of the individual's intelligence

It is possible that the **social** (not **innate**) aspects are the most important factors in the development of the individual.

The Psychology of Culture

It will be argued that **social** (not **innate**) aspects are critical factors:

- It will be argued that **social** (not **innate**) aspects are critical factors in the development of the individual.
- It will be argued that **social** (not **innate**) aspects are critical factors in the development of the individual.
- It will be argued that **social** (not **innate**) aspects are critical factors in the development of the individual.
- It will be argued that **social** (not **innate**) aspects are critical factors in the development of the individual.
- It will be argued that **social** (not **innate**) aspects are critical factors in the development of the individual.
- It will be argued that **social** (not **innate**) aspects are critical factors in the development of the individual.

The Psychology of Culture

- It will be argued that **social** (not **innate**) aspects are critical factors in the development of the individual.
- It will be argued that **social** (not **innate**) aspects are critical factors in the development of the individual.
- It will be argued that **social** (not **innate**) aspects are critical factors in the development of the individual.
- It will be argued that **social** (not **innate**) aspects are critical factors in the development of the individual.
- It will be argued that **social** (not **innate**) aspects are critical factors in the development of the individual.
- It will be argued that **social** (not **innate**) aspects are critical factors in the development of the individual.

It is possible that the **social** (not **innate**) aspects are the most important factors in the development of the individual. It is possible that the **social** (not **innate**) aspects are the most important factors in the development of the individual. It is possible that the **social** (not **innate**) aspects are the most important factors in the development of the individual.
